Erdem Süren

Full-Stack Software Engineer · .NET & React/Next.js

AI-native, end to end

Istanbul, Türkiye · erdemsurentr@gmail.com
linkedin.com/in/erdemsurentr · github.com/erdestre · erdemsuren.com

Summary

Full-stack software engineer with more than 3 years of professional experience, nearly 3 of them on enterprise systems at İGDAŞ and BELBİM. I build and run business software end to end: .NET APIs, React/Next.js front ends, SQL Server and PostgreSQL, and self-hosted CI/CD on IIS and Cloudflare. I work AI-native: I direct Claude Code agents inside an environment I set up (tests, separate test and production servers, automated deploys) and own the architecture, the review and the release. Alongside my full-time role I founded Eribitech and built Eribi, a multi-tenant e-commerce platform I operate in production on servers I set up and run myself.

Experience

BELBİM Elektronik Para ve Ödeme Hizmetleri A.Ş.

Istanbul · Hybrid

Software Development Specialist — **Jul 2025 – present**

- Built the corporate websites belbim.istanbul and istanbulkart.istanbul with an Umbraco headless CMS and Next.js 15: SSG and ISR, Turkish/English content, WCAG-focused accessibility features.
- Rebuilding a legacy Umbraco system as a headless CMS in layered Clean Architecture (Domain / Application / Infrastructure): versioned content, state-based publishing, Repository, Strategy and Result patterns.
- Integrated LDAP / Active Directory authentication for centralized access control.
- Member of the team developing the İstanbulkart mobile app.

Eribitech · eribitech.com

Istanbul · alongside full-time employment

Founder — **2025 – present**

- Designed and built Eribi, a multi-tenant e-commerce platform for agencies to run their clients' stores: .NET 8 core with a database per tenant, automated store provisioning (database, Cloudflare DNS, SSL, IIS), subscription billing, Next.js partner panel and storefront (storefront co-developed with a teammate).
- Split the payment, e-invoice, notification, domestic and international shipping, domain, marketplace, ERP and AI integrations into 9 services behind a YARP API gateway (the marketplace service co-built with the same teammate); every cutover sits behind a feature flag with instant rollback.
- Operate the platform on separate test and production Windows servers behind Cloudflare, with 100+ GitHub Actions workflows on self-hosted runners (deploys, backups, restore drills).
- Migrated it from SQL Server to PostgreSQL 17 (Aug 2026) and cut production idle memory use from 72% to 60% after measuring it.
- Built AI features: a Gemini tool-use assistant with SSE streaming and credit metering, an AI media studio on fal.ai and Claude-generated website analysis reports.
- AI-native delivery: since May 2026, most of my commits at Eribitech have been co-written with Claude Code.

İGDAŞ (İstanbul Gaz Dağıtım San. ve Tic. A.Ş.)

Istanbul · On-site

Software Developer — **Dec 2023 – Jul 2025**

- Worked on four enterprise systems, mainly the 24/7 Operations Automation Platform used by field teams (C#, ASP.NET, React, SQL Server).
- Modeled field-operation workflows (intake, assignment, execution, completion, reporting) as deterministic state machines.
- Built rule-based scheduling for on-demand and recurring jobs, and inventory flows across central warehouses, vehicle depots and field consumption that stay consistent under concurrent use.
- Worked on the SAP S/4HANA integration (sync, validation, retries, failure recovery) and Active Directory authentication; wrote data-intensive SQL reports; took part in the KVKK (data protection) audit.
- Contributed to the infirmary appointment and medical-supply system, the technical-specification approval workflow and the redevelopment of the corporate website.

Career break Jul 2023 – Dec 2023

Deliberate move from game development to .NET backend: .NET Core, ASP.NET Core MVC, WPF, WinForms.

Tiramisu Studios Remote

Game Developer Dec 2022 – Jul 2023

- Worked in Unity and C# with the studio team on core systems of the mobile racing games Drift Max Pro (120M+ downloads) and Drift Max City (25M+ downloads); download figures as published by the studio.
- Optimized the traffic system with object pooling, built Unity editor tools for the Drift Max City open-world map, and improved map loading and occlusion culling to reduce GPU load.

Game Development Intern Sep 2022 – Nov 2022

- Prototyped a 3D drift-racing game with a modular shop for vehicle performance and visual upgrades.

Perspactive Studios (independent game project, unreleased) Türkiye

Founder & Game Developer Mar 2021 – Sep 2022

- Started and led a 10+ person team (developers, artists, designers) on “The Delusion: Burdens of the Past”, a 2D roguelite in Unity/C#; set the vision, scope and plan; built enemy AI, player mechanics and inventory.

Selected projects

DarkPost Agency — company website Aug 2026 – Sep 2026

Client work · darkpost.com.tr · Next.js 16, React 19, TypeScript, Tailwind CSS 4, zod

- Sole developer. The store application form posts to the Eribi partner API via a server-side BFF, so the browser never sees the API key; after client feedback I cut the form from 22 to 10 fields.

Olser Bilişim — company website and admin panel May 2025 – May 2026

Client work · olserbilisim.com · .NET 8 Web API, React 18, Vite, Tailwind CSS 4, Next.js 16

- Sole developer of the website and content admin panel of a software company serving accountants and the finance sector: first built with React/Vite on a .NET 8 API, then rewritten in Next.js 16 (not deployed yet).

ODİS — age-rating workflow Feb 2026

Prototype · .NET 8 (Clean Architecture), EF Core, SQL Server, ASP.NET Identity, JWT · Next.js 16, TanStack Query

- Sole developer of a multi-role prototype for rating games and digital content by age: application, evidence uploads, code and game review, pedagogical assessment, legal decision and audit log.

Skills

Backend: C#, .NET 8, ASP.NET Core (Web API, MVC), Entity Framework Core, REST APIs, Hangfire, Umbraco

Frontend: React, Next.js (App Router, SSG/ISR), TypeScript, JavaScript, Tailwind CSS, HTML5, CSS3

Data: Microsoft SQL Server (T-SQL), PostgreSQL 17

Architecture: Clean Architecture, N-layer, multi-tenancy, state machines, microservices, design patterns

Integrations: SAP S/4HANA, Active Directory / LDAP; payment, e-invoice, shipping and marketplace APIs

DevOps: CI/CD (GitHub Actions, self-hosted runners), IIS, Cloudflare, PM2, PowerShell, Windows Server, Git

AI: agentic development with Claude Code; LLM integration (Gemini tool use, SSE streaming, Claude API), fal.ai

Testing: xUnit, Moq, FluentAssertions, Vitest, Testing Library

Education

Bahçeşehir University — BSc in Computer Engineering (English-medium) Istanbul · 2017 – 2022

Certifications and training

- C# and ASP.NET Core MVC, 260-hour certificate program — C ve Sistem Programcıları Derneği · Aug 2024
- Microservice Architecture; React and React Native — corporate training, BT Akademi (BELBİM)
- Udemy: .NET 8 API/Web with N-Layer and Clean Architecture; SQL Server Database Administration · 2024

Languages

Turkish — native · English — professional working proficiency (English-medium degree)
